

A Morphology splits into size and shape

The 7 indices cluster onto two axes

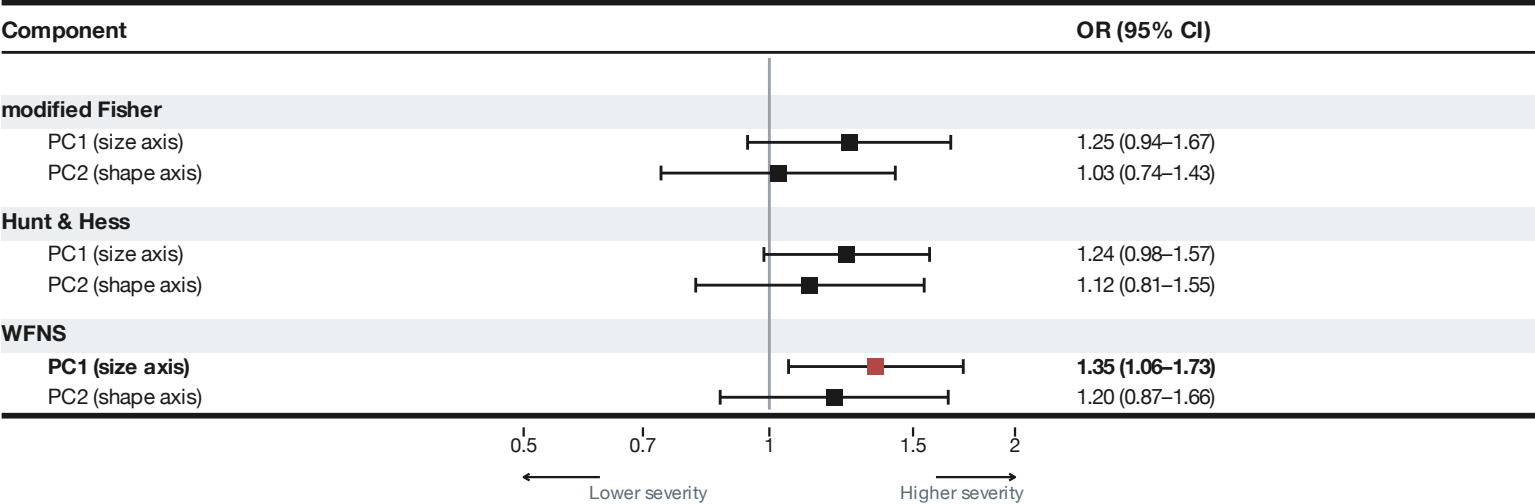

B Variance explained

C Which axis tracks severity?

Size-axis (PC1) scores track severity most clearly for WFNS; shape-axis (PC2) scores do not (red = 95% CI excludes 1)

A, PCA loading biplot; arrow colour marks the axis (blue = size/PC1, gold = shape/PC2) on which each index loads more strongly.
C, Proportional-odds OR per 1 SD, adjusted for the same seven covariates as Figure 2. Marker and whisker style as in Figure 2; red = 95% CI excludes 1.
