

Table 3. Associations surviving FDR correction

Multiple-imputation estimates, ranked by FDR

Outcome	Predictor	OR (95% CI), <i>p</i>	FDR
Hunt & Hess	Aspect ratio	1.71 (1.22–2.40), 0.002	0.038
modified Fisher	Size ratio	1.67 (1.17–2.39), 0.004	0.046
Hunt & Hess	Size ratio	1.54 (1.10–2.16), 0.011	0.047
Hunt & Hess	Volume (log)	1.61 (1.14–2.27), 0.007	0.047
WFNS	Aspect ratio	1.50 (1.10–2.05), 0.010	0.047

Proportional-odds (cumulative) odds ratios per 1 SD, adjusted, from multiple imputation. Five of the 21 ordinal morphology–severity tests (7 indices × 3 grades) survive Benjamini–Hochberg correction.
